

Break-Even Calculator

Water, RO & Sanitation

Document type: Financial model / analysis · Generated 27 Aug 2026

This guide explains what the tool produces, how to use the output, and what to watch for. The actual output (draft/report) is generated on the tool page.

Background

Calculates break-even volume and price for a water business from fixed and variable costs and realisation — showing the margin of safety. Use it to know the minimum volume and price you must achieve.

Purpose of this tool & output

Find break-even volume and price

How the output is used

Use it to find break-even volume and price — a break-even calculator on fixed cost, cost-per-litre and price.

Who should vet it

Your CA or finance lead, to confirm the fixed cost and cost-per-litre in the break-even.

Important cautions

A break-even estimate from your inputs; water businesses have high fixed costs so volume and utilisation are decisive. Recompute with actuals and keep a safety buffer against price competition.
